School : School of Computer Science
and Engineering
Name of the University : Lovely Professional University
Date of Submission : 26 September 2023

Lovely Professional University

Jalandhar, Punjab, India

Q1. Create a VM machine using hypervisor 1 ?

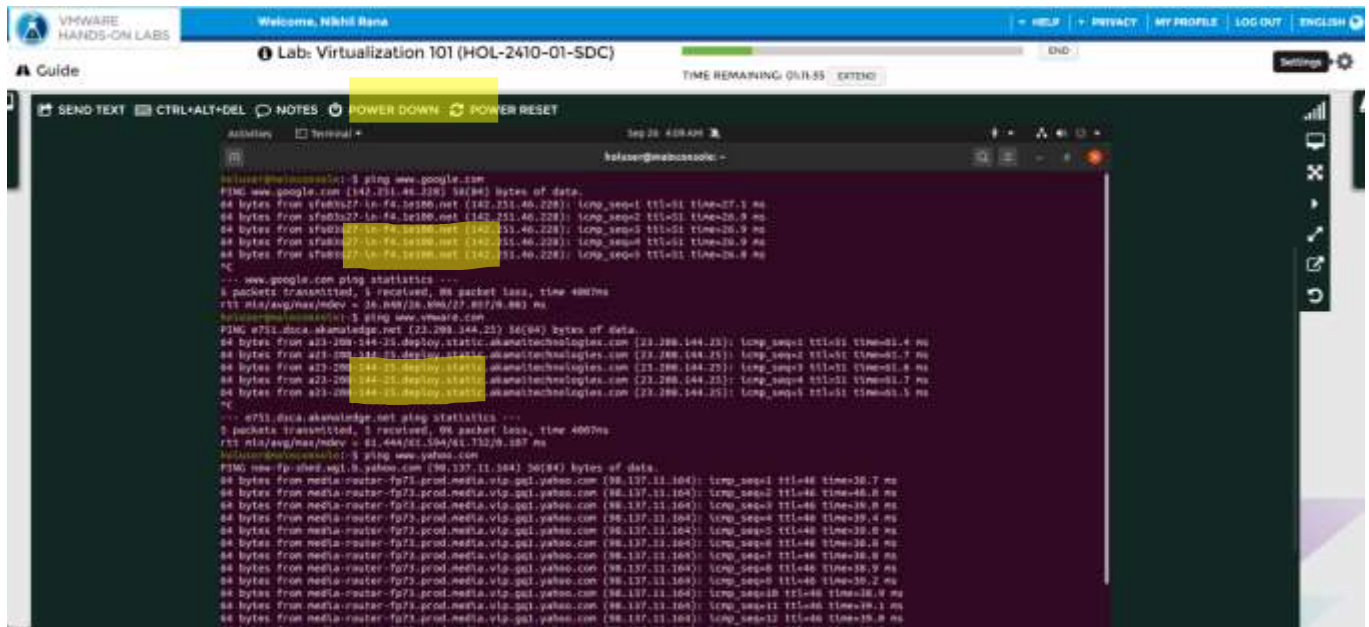

Q2. Use Ping command to ping 3 different computers ?

Here , I have sent packets using ping command to three different domain names

1. www.google.com
2. www.vmware.com
3. www.yahoo.com

The screenshot shows a VMware Hands-on Labs interface. At the top, there's a blue header with the VMware logo, the text "Hands-on Labs", and a welcome message "Welcome, Nikhil Bana". To the right of the header are links for "HELP", "PRIVACY", "MY PROFILE", "LOG OUT", and "ENGLISH". Below the header, there's a "Guide" section and a "Lab: Virtualization 101 (HOL-2410-01-SDC)" title. A progress bar indicates "TIME REMAINING: 01:11:55" and "EXTEND" button. On the right, there's a "Settings" gear icon. The main area is a terminal window titled "Terminal" with a "SEND TEXT" button and "CTRL+ALT+DEL" key combination. The terminal shows the following output:

```
ksfaser@webcode:~$ ping www.google.com
PING www.google.com (142.251.48.228) 56(84) bytes of data:
